Investment objective and investment policy

The sub-fund's investment objective is primarily to achieve medium-term capital growth through income (interest, coupons, income payments, distributions) and capital gains, whilst maintaining an appropriate level of risk through investments in securities and other assets. It is an actively managed sub-fund that does not track a benchmark. The sub-fund invests in a broadly diversified portfolio of securities, comprising structured products, equities, bonds and other assets, in accordance with the principle of risk diversification. To achieve its investment objective, the sub-fund is, in particular, permitted to invest up to 50 per cent of its assets in structured products traded on a stock exchange or another regulated market open to the public, for the purposes of yield enhancement or capital protection. Furthermore, the sub-fund invests the remainder of its assets globally in fixed- or variable-rate debt securities and debt instruments issued by private, mixed-ownership and public-sector debtors (bonds, gilts, notes, zero-coupon bonds, floating-rate notes, convertible and option bonds, debentures, etc.), in equity securities and equity interests worldwide (shares, shares with warrants, etc.), as well as in deposits – in particular fixed-term deposits with first-class banks – in money market instruments – namely 'bankers' acceptances', 'commercial papers', 'money market book receivables' – and in other short-term money market instruments bearing fixed or variable interest rates. Investments are made predominantly (at least 51% of the sub-fund's assets) in assets denominated in Swiss Franc (CHF). In addition, assets denominated in other currencies may also be held. In order to minimise currency risk, assets not denominated in the sub-fund's accounting currency may be hedged on a temporary or permanent basis.

Fund specific risks

The performance of the units depends on the investment policy and on market developments relating to the UCITS' individual investments, and cannot be determined in advance. In this context, it should be noted that the value of the units may rise or fall at any time relative to the issue price. There is no guarantee that the investor will recover the capital invested. As the sub-fund's assets are invested in structured products issued by domestic and foreign issuers and traded on a stock exchange or another regulated market open to the public, this type of investment carries an increased risk of issuer risk and market risk, which may have a negative impact on the net assets. Furthermore, as the sub-fund's assets may be invested in both equity securities and rights, as well as debt securities and rights, this type of investment entails additional market and issuer risk, as well as interest rate risk, which may have a negative impact on the net assets. In addition, other risks, such as currency risk, may arise. The use of derivative financial instruments that are not used for hedging purposes may result in increased risks.

Profile of the typical investor

The G7NESIS Harvest Fund CHF is suitable for investors whose expected returns exceed the level of capital market interest rates. Security and liquidity are secondary to the prospect of returns. This entails higher risks relating to equities, interest rates and currencies, as well as credit risks, which may lead to potential capital losses.
